# SEMINAR/ASSIGNMENT: CURRENT RESEARCH IN BIG DATA ANALYTICS

All students are hereby instructed to prepare and deliver a **seminar presentation** based on a **recent publication (2022 onwards)** from a **Scopus-indexed journal** in the area of **Big Data Analytics**.

This seminar is intended to:

- Familiarize students with contemporary research trends in Big Data.
- Encourage critical reading of peer-reviewed academic literature.
- Develop presentation and academic writing skills in the context of data technologies.

## Instructions for Students

### 1. Topic Selection

- Download and refer to **at least three Scopus-indexed journal article** published in the **last 3 years (2022–2025)**.
- Ensure the topic is specific, focused, and aligned with contemporary Big Data practices or challenges (e.g., distributed computing for big data, real-time analytics, big data in healthcare, data lake architectures, etc.).
- Topics can be from but are not limited to:

    - Big Data architectures and frameworks (e.g., Hadoop, Spark)
    - Data lake management
    - Stream and real-time processing
    - Privacy and security in Big Data
    - AI/ML integration in Big Data platforms
    - Case studies or application areas (e.g., healthcare, finance, IoT)
- Avoid generic overviews or non-research-based content.

## Submission Instructions

### 1. Seminar Report

- Must be written in **IEEE format** (approx. 6–8 pages).
- Include: Abstract, Introduction, Problem Definition, Methodology, Results (as applicable), Analysis, Conclusion, and References.
- **Submit as a PDF** via LMS to the course facilitator.

### 2. Presentation

- Duration: **7 minutes presentation + 3 minutes Q&A**
- Format: **PowerPoint (.pptx)** or **Google Slides**
- Include visuals, diagrams, or system architectures where applicable.

- Originality and clarity of explanation will be key evaluation parameters.

**3. Deadline**

- **Topic Confirmation:** On or before 18/06/2025
- **Seminar Report Submission:** 30/06/2025 in moodle
- **Presentation Date:** Starting from 3rd July

---

## Evaluation Criteria

- Relevance and quality of the selected paper
- Technical depth and clarity of understanding
- Organization and structure of the report
- Visual effectiveness and communication in the presentation
- Engagement with audience during Q&A

Students are encouraged to search for articles using:

- **Scopus Database** (via institutional access)
- **ScienceDirect**, **SpringerLink**, **IEEE Xplore**, **Elsevier**, or other Scopus-indexed sources

Use appropriate filters to find recent papers in the Big Data domain.

---

## Academic Integrity

- Plagiarism in any form will lead to disqualification.
- Ensure proper citation and reference of all sources used

For any clarification or topic approval, please email keerthy@rajagiri.edu or meet during academic hours.

Let this seminar be an opportunity for you to connect classroom concepts with real-world research in Big Data Analytics.
